

Inventor and InventHelp Client Develops Fuel-Saving Engine Modification (DVR-755)

Based in Pittsburgh, Pa., InventHelp is submitting the FROST DRIVE MAGNETIC STROKE ASSIST to companies for their consideration.

PITTSBURGH, PA (<u>PRWEB</u>) November 25, 2016 -- "I originally dreamed of this idea as a high-performance modification for racing engines, but then I realized that it could help all vehicles operate with greater fuel efficiency," said an inventor from Denver, Colo.

He developed the patent-pending FROST DRIVE MAGNETIC STROKE ASSIST to allow the engine to generate more power. The system reduces fuel consumption without sacrificing power in turn. This lessens dependency on nonrenewable energy sources. The invention is suitable for use with vehicles traveling by land, air or sea. It is adaptable for use with both petrol and diesel engines. In addition, the system can be retrofitted to any existing internal combustion engine.

The original design was submitted to the Denver office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-DVR-755, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
