

Inventor and InventHelp Client Develops Traction Device for Stuck Vehicles (LGI-2275)

Pittsburgh-based InventHelp is submitting the ICE BREAKER to interested companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) November 28, 2016 -- "I helped someone whose vehicle was stuck in deep snow with the tires just spinning and spinning, and I had to do a lot of digging to get them back on the road," said an inventor from Huntington Station, N.Y. "I thought that something like this would have made the job much easier."

He created a prototype for the ICE BREAKER to provide extra traction when a tire is stuck in deep snow or in loose ground cover. This allows the drive wheel to generate enough force to propel the vehicle out of the rut. The device prevents tires from spinning away uselessly. It eliminates the need to dig out the wheels, which saves time and effort. Furthermore, the compact design stores easily in the vehicle's trunk.

The original design was submitted to the Long Island office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-LGI-2275, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
