

InventHelp Inventor Develops Safety Accessory for Children/Pets in Vehicles (ROH-215)

Pittsburgh-based InventHelp is attempting to submit the MICHP - PROTECTION SYSTEM FOR BABIES IN CARS to companies for review.

PITTSBURGH, PA ([PRWEB](#)) December 02, 2016 -- "Between 1998 and 2010, more than 500 children died because they were forgotten and left behind in unattended motor vehicles," said an inventor from Rochester, N.Y. "I came up with this safety system in order to prevent these tragic deaths."

He developed the MICHP - PROTECTION SYSTEM FOR BABIES IN CARS to alert the motorist that there is a child in the vehicle. This prevents the motorist from forgetting about a child in the rear seat. The system is designed to prevent injuries and deaths caused by hyperthermia. It offers added peace of mind to parents and caregivers. The invention is adaptable for use with any new or existing vehicle, and it features automatic operation. Furthermore, the system also safeguards the lives of pets.

The original design was submitted to the Rochester office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-ROH-215, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
