

## **InventHelp Client's System Facilitates Emptying of an RV's Black-Water Tank (SKC-185)**

*InventHelp is working to submit the BOWCUTT BLACK TANK BUBBLER to companies for their consideration.*

PITTSBURGH, PA ([PRWEB](#)) December 03, 2016 -- RVs have black-water tanks for containment and disposal of waste, but accumulated sewage tends to become compacted and clogs up the system, making emptying difficult. "I needed a better way to break up sewage and empty my RV's black tank," said an inventor from Clarkston, Wash., "so I decided to develop an idea that met that need."

The patent-pending BOWCUTT BLACK TANK BUBBLER streamlines the emptying of an RV's black water by preventing clogging of sewage. It ensures that sewage is broken up so that it flows properly. As a result, it avoids hassle, messes and the expense of hiring a plumber.

The BOWCUTT BLACK TANK BUBBLER is functional, practical, efficient, affordable and producible in different sizes. In addition, the inventor has created a prototype of his idea.

"I've lived in Granite Lake RV Resort for six years and have been called out numerous times for plugged-up RVs," the inventor added. "I've had 100-percent success all within five minutes of apparatus hookup."

The original design was submitted to the Seattle office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-SKC-185, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
