

## **Automotive Child Safety System Invented by InventHelp Client (BGF-1072)**

*InventHelp is submitting this idea, the G.Y.B.S.S. (DEVICE) to companies for their potential consideration.*

PITTSBURGH, PA ([PRWEB](#)) December 05, 2016 -- All too often, the headlines reflect the sad news of another infant who died because they were forgotten and left in a locked car for hours. Fortunately, an inventor from Redford, Mich., has come up with an idea that would keep children from dying in this manner.

She developed G.Y.B.S.S. (DEVICE), to alert the driver that a child is still in the car seat after the car is turned off. As such, it prevents injuries and loss of lives from children being left behind in locked cars in extreme weather conditions. As such, it affords peace of mind for concerned parents. Another advantages are that it is versatile for use with any model of car and child car seat and is easy to install and use. Also, its simple design minimizes production costs. In addition, it is convenient, effective and affordably priced.

The inventor's personal observations inspired the idea. "I was concerned about the number of children who have died because they were left behind unattended in a hot locked car. This device would prevent such tragedies."

The original design was submitted to the Bingham Farms office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-BGF-1072, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
