

SMART TAIL LIGHTS Invented by InventHelp Client (NJD-1272)

Pittsburgh-based InventHelp is working to submit this idea, the SMART TAIL LIGHTS, to companies for their review.

PITTSBURGH, PA (<u>PRWEB</u>) December 12, 2016 -- An inventor, from Bayonne, N.J., thought there needed to be an accurate way for drivers to keep a safe distance between vehicles, so he invented the patent-pending SMART TAIL LIGHTS.

The SMART TAIL LIGHTS provide an effective way to show if a vehicle is stopping, accelerating or drifting. In doing so, they could help to eliminate confusion and potential accidents. As a result, they enhance safety. The invention features a practical design that is convenient and easy to use so it is ideal for motorists. Additionally, the SMART TAIL LIGHTS are producible in design variations.

The inventor described the invention design. "My design enables drivers to determine if a vehicle is breaking, coasting or accelerating."

The original design was submitted to the New Jersey office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-NJD-1272, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
