

Access and Start a Vehicle in a Quicker, Safer Manner With the CFTLI - Designed by InventHelp Client (PHO-2297)

One of America's largest invention companies, InventHelp is submitting the CFTLI to companies for their review.

PITTSBURGH, PA ([PRWEB](#)) December 13, 2016 -- While working security at a retail store, one of two inventors from Glendale, Ariz., noticed many patrons struggling to open their vehicle doors in order to put their merchandise away and get in as quickly as possible in order to feel safe at night. "This gave me the idea for a way to prevent this problem and increase security in such a situation," he said.

He and the co-inventor then developed the CFTLI, a system that enables a person to open and get into his or her vehicle in a quicker, more efficient manner. This avoids struggle and frustration, and allows him or her to drive away sooner. As a result, it promotes safety and peace of mind at night. It also prevents tampering and theft.

Featuring an easy-to-use, versatile design, the CFTLI serves as an alternative to conventional vehicle-security systems, and it's producible in design variations.

The original design was submitted to the Phoenix office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-PHO-2297, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
