

InventHelp Inventor Develops Improved Child's Car Seat (FRO-411)

InventHelp, a leading invention submission company, is submitting the ROLL-A-BABY to companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) December 19, 2016 -- "I see so many parents struggle with their children and their car seats," said an inventor from Orosi, Calif. "Nobody wants to have to deal with lugging around so much stuff while having to carry a child as well. To make life easier, I devised an improved car seat."

He developed the ROLL-A-BABY to make it easier to get the child into and out of the vehicle. The design reduces physical stress and strain, and eliminates hassles and frustrations. It ensures that traveling with a young child is less stressful. The device is adaptable for use in any vehicle. Furthermore, the invention features a space-saving, versatile, multifunctional design.

The original design was submitted to the Fresno office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-FRO-411, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
