

Improved Windshield-Wiping System Invented by InventHelp Client (STU-2139)

InventHelp, based in Pennsylvania, is submitting the SNOWBUSTER to companies for their possible consideration.

PITTSBURGH, PA (PRWEB) December 26, 2016 -- Clearing windshields and dealing with inoperable windshield wipers during winter weather is not only frustrating, but it can be dangerous. Having to brush or chip away at the windshield before wipers can even move, takes a lot of time and effort, and having to reach out of the driver-side window or stopping the vehicle to knock accumulated snow and ice from a wiper raises the risk of accidents. "My design eliminates the inconvenience and danger of slipping or trying to beat the snow off the windshield," said an inventor from Layton, Utah.

The SNOWBUSTER provides an alternative way to clear snow and/or ice from a windshield. It eliminates the need to brush and scrape the windshield or flip the wipers. It also avoids having to reach out of the driver-side window or stop the vehicle to knock accumulated snow and ice from the wipers, which helps prevent accidents.

Ergonomic, durable and easy to use, the SNOWBUSTER is designed to save time and effort, and it's suitable for cars, trucks, semi-tractors, buses, etc. Only the blade needs replacement, never the wiper, there's a 3-year warranty on the heater element, and blades cost \$6 each.

The original design was submitted to the Salt Lake City office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-STU-2139, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
