

## **Inventor and InventHelp Client Develops Safe Driving System to Stop Cell-Phone Use (STU-2147)**

*Pittsburgh-based InventHelp is submitting THE CRADLE to companies in the hopes of their good faith review.*

PITTSBURGH, PA ([PRWEB](#)) December 26, 2016 -- "I have watched my own children use their cell phones while they were driving, which is incredibly dangerous," said an inventor from Logan, Utah. "Fearing for their safety, I came up with a system that prevents the use of a hand-held cell phone while driving. Also, a few years ago, Utah passed a law which fines and tickets drivers who use their phones while driving. This invention would comply with this law."

She developed THE CRADLE to stop the driver from using a hand-held cell phone while the vehicle is in operation. The system enables the driver to concentrate fully on the road ahead. The invention minimizes potential distractions, which is designed to enhance roadway safety. It lessens the risk of automotive collisions caused by inappropriate cell-phone use. Additionally, the invention is adaptable for use with any vehicle.

The original design was submitted to the Salt Lake City office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-STU-2147, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
