

InventHelp Inventor Develops Wind-Gust Alert System for Vehicles (TOR-9249)

Founded in 1984 in Pittsburgh, InventHelp is submitting the GUST DETECTOR to appropriate companies for their review.

PITTSBURGH, PA (PRWEB) November 11, 2015 -- "Strong wind gusts can greatly affect a vehicle's handling, and if drivers are not prepared, they may lose control and get into accidents," said an inventor from Brampton, Ontario, Canada. "To warn drivers of dangerous wind conditions so that they are alert and ready, I invented this system."

He developed the patent-pending GUST DETECTOR to warn the driver of potentially dangerous wind gusts. This enables the driver to take precautionary steps to avoid losing control of the vehicle. The system improves handling in windy conditions. It is designed to enhance roadway safety by reducing the incidence of accidents. Additionally, the unit provides added peace of mind and is adaptable for use with any vehicle.

The original design was submitted to the Toronto office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 14-TOR-9249, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
