

Inventor and InventHelp Client Develops Convenient Automotive Ramps (BMA-4818)

A Pennsylvania-based invention firm, InventHelp is working to submit the EASY LIFT RAMPS to companies for their review.

PITTSBURGH, PA ([PRWEB](#)) March 29, 2017 -- "Even when a vehicle has been driven onto a set of ramps, it can still be difficult to crawl underneath and work efficiently," said an inventor from New Bedford, Mass. "I came up with these modified ramps to make it easier for do-it-yourselfers and automotive professionals."

He developed the patent-pending EASY LIFT RAMPS to easily lift the vehicle so that an individual can fit beneath it in order to work efficiently. The design ensures that there is ample room to work beneath the vehicle. The ramps allow a creeper to be slid in and out from underneath the vehicle quickly and easily without worrying about it being a tight fit. They provide access to all parts of the vehicle from the underside, which helps the user to service and repair components with much more room to move while working. Furthermore, the ramps are designed for ease of use and to save time on jobs.

The original design was submitted to the Boston office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-BMA-4818, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
