

InventHelp Inventor Develops Windshield-Wiper Enhancer for Bug Removal (CIC-428)

Pittsburgh-based InventHelp is working to submit the BUG BE GONE to companies for their potential feedback.

PITTSBURGH, PA ([PRWEB](#)) March 30, 2017 -- "While driving from northern Wisconsin to Chicago in the summer, my windshield was completely covered in bug remains," said an inventor from Chicago, Ill. "My wipers did nothing to help. I came up with this idea to effectively clear insect remains off the windshield."

He developed the patent-pending BUG BE GONE to effectively remove insect splatter from the windshield. The accessory keeps the windshield clean and free of debris, which ensures that the driver has an unobstructed view of the road. The unit eliminates the need to pull over in order to clean the windshield manually. It will not scratch or mar the glass. Furthermore, the invention is adaptable for use with any new or existing vehicle.

The original design was submitted to the Chicago office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-CIC-428, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
