

Invention Allows For Safer Engagement of Anti-Lock Braking Systems - Designed by InventHelp Client (MIS-225)

A leading invention submission firm, InventHelp is submitting the ABS STROBE LIGHT to companies for their review.

PITTSBURGH, PA ([PRWEB](#)) April 06, 2017 -- An inventor from Tomah, Wis., believes that drivers need better communication about stopping distances, slowing down or hitting the brakes hard in order to prevent accidents. "This concern caused me to consider the safety of ABS engagement," he said. "That's why I came up with this idea."

The patent-pending ABS STROBE LIGHT provides a safer way for a vehicle's anti-lock braking system (ABS) to engage. This helps avoid accidents that can cause damages, injuries and fatalities. It also eliminates need for repairs, which saves money.

Easy to use and compatible with all vehicles, the ABS STROBE LIGHT is designed to alert other drivers and promote peace of mind on the road in general.

The original design was submitted to the Milwaukee office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-MIS-225, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
