

Truck-Cab Protection Allows for Damage-Free Hauling of Long Items - Designed by InventHelp Client (PIT-420)

Pittsburgh-based InventHelp is working to submit this idea, the CAB PROTECTOR, to appropriate companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) April 13, 2017 -- An inventor from Star City, W.V., works in construction, so he's familiar with the inconvenience and damage caused by having to lean long pieces of wood and/or ladders across the edge of the exterior of a pickup-truck cab. "In order to prevent the unsightly and expensive dents and scratches, I came up with this idea," he said.

He then created a prototype of the CAB PROTECTOR, which allows for more convenient and safer hauling of long pieces of lumber and/or ladders via pickup truck. It prevents the cab exterior from becoming scratched and dented, which avoids unsightliness and the need for expensive repairs.

Ergonomic, durable, portable, easy to use and producible in different sizes, colors and models, the CAB PROTECTOR is ideal for contractors and DIYers.

The original design was submitted to the Pittsburgh office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-PIT-420, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
