

## **Hydroplane Safety System for Vehicles Developed by InventHelp Client (AVZ-1472)**

*A leading inventor service company, InventHelp is submitting WHOOSH to companies in the hopes of their good faith review.*

PITTSBURGH, PA ([PRWEB](#)) May 19, 2017 -- Driving in the rain can be a stressful situation because it can be hard to see, and there is a risk of hydroplaning. This is why an inventor from Mission, Texas, has developed the patent-pending WHOOSH, a vehicle safety system that helps to prevent vehicles from hydroplaning.

"I invented this to help prevent hydroplaning and ensure better traction in the rain. Most people have experienced hydroplaning, and we can all agree it's an unsettling feeling," said the inventor.

WHOOSH helps prevent hydroplaning. As a result, it promotes road safety without the need for hoses, tanks or extra power needed. Overall, it provides an extra layer of safety when traveling on wet roads. It may also offer possible insurance rate reductions.

The original design was submitted to the National Sales office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers.
