

InventHelp Inventor Develops Instant Road Guide (BMA-4835)

One of America's leading invention companies, InventHelp is submitting the PORTABLE YELLOW LINE to companies for their review.

PITTSBURGH, PA ([PRWEB](#)) May 20, 2017 -- An inventor from Manchester, N.H., has developed the patent-pending PORTABLE YELLOW LINE, a sturdy device for construction companies to serve as a temporary traffic indicator. This device will help direct and guide motorists through construction zones in a safe and controlled manner.

"In my experience as a traffic control director, I saw a huge need to show drivers where and how to drive safely in a construction zone," said the inventor.

The PORTABLE YELLOW LINE informs and protects motorists for safer travel. It creates a clear and unmistakable guide on the pavement. This will help prevent accidents from occurring and protect the lives of vulnerable construction workers. As a result, this will reduce liability and insurance costs.

The original design was submitted to the Boston office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-BMA-4835, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
