

Protective Covering Invented for Tarps - Designed by InventHelp Client (HTM-3914)

A leading invention submission firm, InventHelp is submitting the TARP SAVER to appropriate companies for their review.

PITTSBURGH, PA ([PRWEB](#)) May 27, 2017 -- Anyone who hauls loads by truck or trailer knows the value of a good tarp for transporting the cargo safely. Unfortunately, because of the constant exposure to weather and road traffic, tarps can tear too frequently. Fortunately, an inventor from Blue Ridge, Texas, has come up with a way to not only protect the load but the tarp itself.

He developed a prototype for TARP SAVER to insulate a tarp against the adverse effects of inclement weather and road debris. As such, it not only extends the life of the tarp but saves time and money, as well. Besides keeping items from falling unsecured from the truck or trailer, it has a positive effect on the environment by reducing landfill waste. Other appealing features include durability and ease of use. This unique accessory is also adaptable to a variety of pickup trucks and light trailers and is convenient, effective and affordably priced.

The inventor's work experience inspired the idea. "When I hauled loads myself, I noticed that the tarp would wear out quickly," he said. "I got tired of having to replace it so frequently."

The original design was submitted to the National Sales Office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers.
