

InventHelp Device Facilitates the Removal of Carts from Hearses (JMC-1723)

Pittsburgh-based InventHelp is submitting the LUMBAR WHEEL LOCK to companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) November 07, 2015 -- As a retiree from the funeral-home industry, an inventor from Attapulcus, Ga., knows the difficulty of pulling a one-man cart out of a hearse. "In order to streamline this task, I conceived of my design," he said.

The patent-pending LUMBAR WHEEL LOCK eases the removal of a one-man cart from a hearse by eliminating the need to lift the cart. Not only does this ease access to the leg-release handle, but it avoids back strain and/or injury, scuffing the hearse floor and obstructions. As a result, it saves time, effort and money. The device is easy to use and ergonomic.

The original design was submitted to the Telemarketing office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 14-JMC-1723, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
