

InventHelp Client's Device Facilitates Removal of Ice and Snow from Vehicle Tires (KOC-130)

InventHelp, founded in 1984 in Pittsburgh, is submitting the ICE ELIMINATOR to companies for their review.

PITTSBURGH, PA ([PRWEB](#)) November 07, 2015 -- "I've seen vehicle tires jam up due to built-up snow and ice, which can cause accidents," said an inventor from Gananoque, Ontario, Canada. "Also, people tend to injure their feet when trying to kick at the compacted snow and ice." In order to solve these problems he designed an easier method.

The patent-pending ICE ELIMINATOR provides an easier way to remove built-up ice and snow from behind vehicle tires, around stairs and outside of decks. This eliminates the need to kick at snow and ice, as well as helps prevent accidents and injuries. Overall, it promotes safety and peace of mind. The device is ergonomic, easy to use and ideal for all vehicles.

The original design was submitted to the Telemarketing office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 14-KOC-130, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
