

Inventor and InventHelp Client Develops Less-Wasteful Windshield-Wiper Kit (KOC-323)

InventHelp is attempting to submit the REUSABLE WIPER BLADES to appropriate companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) May 31, 2017 -- "While I was changing the windshield wipers on my vehicle, I thought about how much material was being wasted," said an inventor from L'Isle-Perrot, Quebec, Canada. "I thought that there should be a less wasteful way to keep windshield wipers working good as new."

He created a prototype for the REUSABLE WIPER BLADES to allow the blades themselves to be replaced. The design eliminates the need to replace the entire blade arm assembly. The kit keeps windshield wipers working like new. It reduces waste, which is better for the environment. The invention simplifies the process of restoring windshield wipers to their full functionality. Furthermore, it is adaptable for use with both new and existing vehicles.

The original design was submitted to the National Sales office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-KOC-323, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
