Car Door Rain Protector Invented by InventHelp Client (NJD-1375)

InventHelp, a leading invention company, is submitting the AUTOBRELLA to appropriate companies for their review.

PITTSBURGH, PA ([PRWEB](#)) June 05, 2017 -- The few seconds between when an individual steps into or out of their vehicle and when they deploy their umbrella can ruin a day. Depending on the weather, an individual can become soaked in just that short time.

An inventor took this into consideration and invented AUTOBRELLA, an umbrella-like accessory that shields individuals as they exit or enter their vehicle. "I was inspired by my own personal experience with needing protection from the elements when entering & exiting my vehicle with my umbrella," said the inventor. "I decided to invent a device that allows me to organize myself when I reach my destination during bad weather."

When entering the vehicle, AUTOBRELLA offers protection from the rain while putting your stuff and umbrella away. Also, when exiting the vehicle, it will provide protection from rain while you swing your legs out of the vehicle and retrieve your umbrella and other belongings.

This invention also helps to protect the interior of a vehicle from rain, sleet or snow. It would appeal to not only car owners, but also businesses that operate vehicles, particularly taxi or limousine services.

The original design was submitted to the New Jersey office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers.
