

Inventor and InventHelp Inventions Designs Engine Hoist Attachment (PHO-2339)

Pittsburgh-based InventHelp is submitting the R.E.A.L. to companies for their possible feedback.

PITTSBURGH, PA ([PRWEB](#)) June 07, 2017 -- “I work on transit buses. After seeing too many smashed fingers and strained backs, I knew there had to be a better way to lift and support heavy parts,” said an inventor, from Glendale, Ariz., “so I invented the R.E.A.L.”

The R.E.A.L. provides an effective way to lift, position and install heavy engine accessories. In doing so, it could help to prevent injuries and damage. As a result, it enhances safety and it saves time and effort. The invention features an effective design that is convenient and easy to use so it is ideal for diesel mechanics. Additionally, a prototype is available.

The inventor described the invention design. “My design helps to simplify the installation process.”

The original design was submitted to the Phoenix office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-PHO-2339, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
