

## **Child Car Seat Buckle Retainer Invented by InventHelp Client (AVZ-1512)**

*Based in Pittsburgh, Pa., InventHelp is working to submit the CAR SEAT BELT BUCKLE HOLDER to companies for their review.*

PITTSBURGH, PA ([PRWEB](#)) July 12, 2017 -- Once someone becomes a parent, their life becomes much busier. Even the smallest task can become more complicated, often because the parent has one arm already occupied with holding their child. The process of buckling a child into a car seat can be frustrating, as the strap and buckle can easily get stuck underneath the child.

An inventor from Woodbridge, Va., has invented CAR SEAT BELT BUCKLE HOLDER, an accessory that keeps the bottom harness buckle from getting in the way as the baby was being placed into the seat. "I was inspired by my daily struggle to place my son in his car seat and buckle him in," said the inventor. "Many broken fingernails later, I decided to invent this car seat improvement." CAR SEAT BELT BUCKLE HOLDER secures the bottom harness buckle and strap conveniently in position for the next use of the seat.

The original design was submitted to the Pittsburgh office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-AVZ-1512, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
