

Inventors and InventHelp Clients Develop Stress-Relieving Vehicle System (CPC-175)

InventHelp, founded in 1984 in Pittsburgh, is submitting this idea, the ROAD RAGE BUTTON, to companies for their review.

PITTSBURGH, PA ([PRWEB](#)) July 18, 2017 -- Inventors from Old Mystic, Conn., have developed the patent-pending ROAD RAGE BUTTON, an electronic device for drivers to relieve stress while traveling to avoid incidents of road rage. This will calm a driver's nerves and aggression in a safe, fun and entertaining manner.

"A family member suffers from road rage. We needed to find a way to help this person relax and calm his nerves. Since this family member enjoys video games, we thought this would be a pleasant distraction from stressful driving situations," said the inventors.

The ROAD RAGE BUTTON serves as a fun and entertaining means of handling road rage. This device may even prevent road rage incidents. It is ideal for drivers who often feel stressed or upset with other motorists. Video gamers and action movie lovers may find this device especially appealing.

The original design was submitted to the Connecticut office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-CPC-175, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
