

Inventor and InventHelp Client Develops More Informative Brake-Lighting System (FED-1314)

InventHelp, founded in 1984 in Pittsburgh, is submitting the PRESSURE SENSITIVE BRAKE LIGHT to companies for review.

PITTSBURGH, PA ([PRWEB](#)) July 18, 2017 -- "I was almost rear-ended with my young nephew in the car," said an inventor from Tulalip, Wash. "I thought that there should be a way for motorists to tell how hard a vehicle in front of them is braking so that they could brake accordingly and thereby avoid rear-end collisions."

He developed the PRESSURE SENSITIVE BRAKE LIGHT to conveniently indicate how hard the equipped vehicle is braking. The system enables motorists behind the equipped vehicle to brake accordingly. It ensures that motorists do not apply their brakes out of proportion to other vehicles on the road. This reduces the risk of rear-end collisions, which is designed to enhance automotive safety. In addition, the invention provides added peace of mind.

The original design was submitted to the Seattle office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-FED-1314, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
