

GAS PUMP HANDLE Invented by InventHelp Client (SFO-313)

InventHelp, founded in 1984 in Pittsburgh, is submitting the GAS PUMP HANDLE to companies for their consideration.

PITTSBURGH, PA (<u>PRWEB</u>) July 26, 2017 -- An inventor, from South San Francisco, Calif., thought there needed to be a way to pump gas without touching the germy, smelly handle, so he invented the GAS PUMP HANDLE.

The GAS PUMP HANDLE provides a more sanitary way to operate a gasoline pump. In doing so, it eliminates the need to directly grip the pump handle. As a result, it provides added protection and it helps to prevent the spread of germs, bacteria and odor on the hands after use. The invention features a portable design that is convenient and easy to use so it is ideal for vehicle owners. Additionally, the GAS PUMP HANDLE is producible in design variations.

The inventor described the invention design. "My design helps to protect hands from smelly odors and germs when pumping gas."

The original design was submitted to the San Francisco office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-SFO-313, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
