

InventHelp Inventor Designs Safer Turn Signals (MTN-2366)

A leading invention company, InventHelp is submitting this idea, the RAMOS EZ LIGHT, to companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) October 31, 2015 -- When driving it's important to let other drivers what turn is going to be made in order to avoid serious consequences. This is why an inventor from Bronx, N.Y., designed the RAMOS EZ LIGHT. "I wanted to offer drivers a safer way to make turns, so I conceived of my design," he said.

This set of modified front turn signals enables a driver to make turns in a safer manner. This alerts other drivers to what turn is being made, which helps avoid accidents, damage, injuries and fatalities. The set is easy to use, compatible with all vehicles and producible in different sizes.

The original design was submitted to the Manhattan office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 14-MTN-2366, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
