

## **Automotive Rain Gear Invented by InventHelp Client (BRK-2322)**

*InventHelp, a leading inventor service company, is working to submit Carbella to companies for their review.*

PITTSBURGH, PA ([PRWEB](#)) October 02, 2017 -- An inventor from Harvest, Ala., was tired of getting soaked in the rain when ordering at fast food drive-through windows where there was no overhead cover. So he decided to create his own portable automotive rain gear.

He developed the patent-pending CARBELLA to protect drivers against rain and snow when using a drive-through window at a fast food restaurant. As such, it keeps the driver from getting wet with the car window down when it's raining. Furthermore, it prevents moisture accumulation and water damage on the inside of the car. What's more, its versatile design accommodates use with a variety of vehicle models. This unique invention is also convenient, effective and affordably priced. Furthermore, it is lightweight, weatherproof and easy to install and use. In addition, it is ideal for use at banks and other businesses that have drive-through services.

The inventor's personal experience inspired the idea. "After getting wet from the rain while placing an order at the drive through window of a fast food restaurant," he said, "I thought it might be nice to have some protection against the rain handy in such situations."

The original design was submitted to the Birmingham office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers.
