

Inventor Develops Enhanced Automotive Window Tinting (CCT-4003)

InventHelp, a leading inventor service company, is working to submit Solar Shield to companies for their review.

PITTSBURGH ([PRWEB](#)) October 23, 2017 -- "I was driving a vehicle with heavily tinted windows, and I realized that the extreme tinting made it difficult to see while driving at night," said an inventor from Walton, Ky. "My invention idea is designed to provide a safer, more effective alternative to conventional tinting."

She developed the SOLAR SHIELD to offer optimized protection from sunlight and bright glare. The tinting prevents the driver from being blinded by sunlight and glare. It ensures that the driver has a clear view of the road. The invention makes travel more comfortable on bright, sunny days for both driver and passengers. It provides a clear view of the roadway, day and night. Additionally, the tinting is adaptable for use with both new and existing vehicles.

The original design was submitted to the Cincinnati office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-CCT-4003, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
