

Oil Transfer Pump Invented (BSJ-389)

InventHelp, a leading inventor service company, is working to submit Oil Transfer Pump to companies for their review.

PITTSBURGH ([PRWEB](#)) October 26, 2017 -- An inventor, from Boise, Idaho, thought there needed to be an easier, mess-free way for one person to pump transmission fluid, so he invented the OIL TRANSFER PUMP.

The OIL TRANSFER PUMP provides a more efficient way to pump transmission fluid or oil from the container to the filler hole without the use of a hand pump or funnel. In doing so, it helps to prevent spills and frustrations. As a result, it saves time and effort, and it offers added convenience. The invention features a practical design that is easy to use, so it is ideal for do-it-yourselfers and automotive mechanics. Additionally, it is producible in design variations.

The inventor described the invention design. "I've always had to have someone hold the hose in the filler hole while I held the oil and pumped it. I thought that there needed to be an easier, mess-free way for a person to pump transmission fluid, so I invented this."

The original design was submitted to the Boise office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-BSJ-389, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
