

Inventor Develops Effective Danger-Alert System for Drivers (OKG-166)

InventHelp, a leading inventor service company, is working to submit Advance Warning System to companies for their review.

PITTSBURGH ([PRWEB](#)) October 31, 2017 -- An inventor from Oklahoma City, Okla., was trying to alert other drivers that there were cattle blocking the road ahead, but they didn't take his flashing of his truck's lights as a warning. He felt helpless and was very concerned for their wellbeing. "After that I decided that there should be a better way of warning other drivers of danger," he said.

The ADVANCE WARNING SYSTEM enables a driver to alert other drivers to impending danger. It allows for better reaction time, which helps prevent accidents, injuries, fatalities and/or damages. It also avoids the feeling of helplessness.

Easy to use and producible in many design variations, the ADVANCE WARNING SYSTEM is designed to promote safety and peace of mind for all drivers.

The original design was submitted to the Oklahoma City office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-OKG-166, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
