

Inventor Develops Automotive Drip Catcher (RGL-139)

InventHelp, founded in 1984 in Pittsburgh, is attempting to submit this idea, the Anti-Contaminate Cover, to applicable companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) November 01, 2017 -- PITTSBURGH..."I am a cancer survivor, and it is well known that benzenes are carcinogenic," said an inventor from Fort Valley, Ga. "Benzenes are found in petroleum and many other automotive fluids. As a former professional over-the-road truck driver, I deal with these fluids on a daily basis. I came up with this idea to offer protection."

He developed the patent-pending ANTI-CONTAMINATE COVER to prevent automotive fluids from dripping or leaking onto the ground. The accessory ensures that roads are not covered in automotive fluids. It keeps automotive fluids from contaminating the groundwater supply, lakes and ponds. The unit is designed to halt the advance of environmental and health issues. It is very simple to use with any new or existing vehicle. Additionally, the device is made of a lightweight, highly absorbent material.

The original design was submitted to the National Sales office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-RGL-139, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
