

Inventor Develops Redesigned Motorized Children's Vehicle (CIC-261)

InventHelp, founded in 1984 in Pittsburgh, is attempting to submit this idea, the Powertots Car, to applicable companies for their consideration.

PITTSBURGH, Penn. ([PRWEB](#)) November 03, 2017 -- "As a mother of five, I want the best for all of my children, and nothing is more important to me than their happiness and safety," said an inventor from Merrillville, Ind. "Feeling that conventional motorized toy vehicles were unsafe for several reasons, I developed a safer version."

She developed the POWERTOTS CAR to provide a fun way for a child to drive around in a motorized vehicle. This offers hours of entertainment and excitement. The design enables a parent or caregiver to have full control over the vehicle at all times. This keeps the child safe by helping him or her avoid obstacles and dangerous situations. The invention provides added peace of mind to parents and caregivers. Additionally, it saves the adult from having to push the vehicle with the child in it.

The original design was submitted to the Chicago office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-CIC-261, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
