

Haul Long Loads More Conveniently with This Invention (PHO-2368)

InventHelp, founded in 1984 in Pittsburgh, is attempting to submit this idea, the Ideal Rack, to applicable companies for their consideration.

PITTSBURGH ([PRWEB](#)) November 03, 2017 -- PITTSBURGH...Hauling long pieces of wood and such can be a difficult and unstable task, even when using pickup trucks that are designed for heavy loads. The trick is to be able to secure long items so that they don't slide or even fall off the truck. "This problem inspired me to design a reliable way to manage such loads," said an inventor and iron worker from Scottsdale, Ariz.

He then created a prototype of the IDEAL RACK, a modified utility rack that provides a more secure and streamlined way to haul long items and/or materials. It prevents loads from sliding or falling, which avoids damage, hassle and inefficiency. It also eliminates the need for garage storage, unsightly hardware and the need to open the tailgate.

Compatible with all compact and full-size pickup trucks, the IDEAL RACK is durable, space-saving, versatile and easy to install/use, and it's ideal for DIYers, construction workers and other contractors.

The original design was submitted to the Phoenix office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-PHO-2368, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
