

Dashboard Phone Charger Invented (LGI-2439)

InventHelp, a leading inventor service company, is working to submit Magnetic Charging Doc to companies for their review.

PITTSBURGH (PRWEB) November 09, 2017 -- While cell phones have vastly improved communication, they have also created a distraction for drivers. Fortunately, an inventor from Baldwin, N.Y., has made it easier for drivers to focus on the road and still be aware of cell phone activity.

He developed MAGNETIC CHARGING DOC to facilitate quick and easy charging of a mobile phone battery while traveling by car. At the same time, it keeps the cell phone readily accessible while driving. This not only saves time and effort but minimizes driver distraction. Furthermore, it provides the driver with a clear view of the cell phone display screen. This improved car charger is also easy to install and operate. In addition, it is convenient, effective, affordably priced and compatible with all smartphones and iPhones.

The inventor's personal preference inspired the idea. "While driving my car, I wanted to be able to see the display on my cell phone at the same time it was charging."

The original design was submitted to the Long Island office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-LGI-2439, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
