

Automotive Battery Cleaning Tool Invented

Pittsburgh-based InventHelp, a leading inventor service company, is submitting this client's idea, Battery Cleaner in the hopes of a good faith review.

PITTSBURGH ([PRWEB](#)) November 12, 2017 -- An inventor from Maryville, Tenn., has developed the BATTERY CLEANER, a hand tool for brushing dirt and corrosion development off the posts and cable ends of an automotive battery.

"I invented this tool due to personal experience. I had to clean a corroded vehicle battery a few years ago and thought there had to be a better way," said the inventor. The BATTERY CLEANER enables a vehicle owner to quickly and easily restore the full electrical capabilities of the battery. It prevents dirt, grime and corrosion development from impeding current flow to the starter. This will help ensure the engine will start on a consistent basis. In addition, it helps to make the car or truck more reliable while also helping to extend overall battery life.

The original design was submitted to the Nashville office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-KVV-211, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
