

Computer Tablet Holder Invented for Motor Vehicles

Pittsburgh-based InventHelp, a leading inventor service company, is submitting this client's idea, the Pittsburgh-based InventHelp, a leading inventor service company, is submitting this client's idea, Magnetic Attachment Panel in the hopes of a good faith review.

PITTSBURGH, PA ([PRWEB](#)) November 12, 2017 -- Perhaps the best way to prevent driver distraction when traveling with children is to ensure the youngsters are enjoying the ride. This is exactly what an inventor from Bakersfield, Calif., was thinking when she conceived of a sure fire way to keep child passengers content.

She developed a prototype for MAGNETIC ATTACHMENT PANEL to entertain children who are traveling by car. This unique invention is easier to use and more efficient than seat organizers with hanging pockets. As such, it holds a computer tablet or other touchscreen device for use in an automobile. Furthermore, it keeps toys, a cup or other objects, that are at least partly made of metal, easily accessible to child passengers. Another appealing feature is that it folds for easy storage when not in use. It is also ideal for use in cribs and play pens.

The inventor's personal experience inspired the idea. "I spend a lot of time traveling by car with my grandchildren and wanted to find a way to keep them entertained during the trips," she said.

The original design was submitted to the Fresno office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers.
