

Inventor Develops Alternative-Fuel Vehicle (OLC-321)

Pittsburgh-based InventHelp, a leading inventor service company, is submitting this client's idea, S E V - 1 (Self-Energized-Vehicle 1), in the hopes of a good faith review.

PITTSBURGH ([PRWEB](#)) November 20, 2017 -- "I wanted to devise a better way to power a vehicle," said an inventor from Sayre, Okla. "My vehicle concept is safer to operate because there is much less risk of a fire."

He developed the S E V - 1 (SELF-ENERGIZED-VEHICLE 1) to provide an alternative to vehicles powered by petroleum products. This reduces the risk of petroleum products igniting in the event of a collision, which is designed to enhance roadway safety. The alternative system dramatically reduces charging time. The vehicle produces zero emissions, which is better for the environment. In addition, it features lightweight construction and does not require cooling.

The original design was submitted to the Oklahoma City office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-OLC-321, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
