

## **Adjustable Car Seat for Improved Comfort Invented (FLA-2954)**

*Pittsburgh-based InventHelp, a leading inventor service company, is submitting this client's idea, Reclining Baby Car Seat, in the hopes of a good faith review.*

PITTSBURGH ([PRWEB](#)) November 21, 2017 -- There are laws in place that require a child to be securely fastened into a car seat as a way to improve a small child's safety while on the road. Such car seats have statistically saved lives, and while they are extremely important, they can cause a child to become uncomfortable as a result of the child's upright position when in the seat.

An inventor from Royal Palm Beach, Fla., has invented RECLINING BABY CAR SEAT, an improved child's car seat that features an adjustable feature to facilitate reclining the child backward while he/she is sleeping in the car. "I was inspired by my 5 grandchildren, especially the one with down syndrome whose neck falls when she is sleeping," said the inventor. "We do a lot of road trips, which involve night driving, and I thought this invention would improve their comfort during such trips significantly."

RECLINING BABY CAR SEAT prevents children's and infants' head from bobbing around or falling forward while sleeping and ensures that the child can be placed at the most comfortable angle whether sleeping or awake. Additionally, this invention reduces the number of times a parent would have to pull the car over to adjust their child's car seat, saving time and energy and contributing to a smoother and quicker car ride. It also eliminates the need to turn around or reach into the back seat to adjust a child's position, improving safety for all passengers.

The original design was submitted to the Fort Lauderdale office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers.
