

Unattended Child Vehicle Alert Invented (HLW-1900)

InventHelp, a leading inventor service company, is working to submit Vehicle Child Safety Alert System to companies for their review.

PITTSBURGH ([PRWEB](#)) November 21, 2017 -- PITTSBURGH...Each year, there seem to be a number of tragic news stories about a child left behind in an unattended vehicle, often ending in the death of the child.

In an attempt to prevent such tragedies, an inventor from Homestead, Fla., has invented the patent-pending CHILDREN SAFETY DEVICE, a safety system that prevents deaths to babies, young children and pets left unattended in motor vehicles. "I wanted to invent a device that would save children's lives. Such a device would also assist in the expeditious recovery of a stolen vehicle when a child is left unattended inside," said the inventor.

CHILDREN SAFETY DEVICE provides parents and caregivers with peace of mind that their child would not die when left unattended in a vehicle during extreme temperatures. This invention ensures that a tendency for busy parents to be forgetful does not result in the death or injury of their child. Additionally, it allows parents to keep track of children in public without constantly maintaining physical contact.

The original design was submitted to the Hollywood/Miami office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-HLW-1900, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
