

InventHelp Inventor Develops Automatic Jack System for Motor Vehicles

InventHelp, founded in 1984 in Pittsburgh, is attempting to submit this idea, the Auto Built-In Car Jacks, to applicable companies for their consideration.

PITTSBURGH ([PRWEB](#)) December 03, 2017 -- While there's never a convenient time to get a flat tire, there is now, at least, a convenient way to jack up the car. Because of the creativity of an inventor from Lusby, Md., much of the manual labor involved in changing a tire is no longer necessary.

He developed AUTO BUILT-IN CAR JACKS to provide a safe, easy and reliable way to jack up a car. As such, it prevents accidents causing injuries and deaths from cars falling off jacks. Furthermore, it saves time and effort since it eliminates the need for manual manipulation of a traditional scissors-style jack. Not only is this invention easy to use, it is also maintenance free. Other appealing features are its convenience and effectiveness. In addition, it is ideal for brake service, oil changes and inspections.

The inventor's personal concerns inspired the idea. "While I wanted to find a way to save time and effort when changing a flat tire, my most important concern was with safety," he said. "With this invention, the user is never in danger of being injured or killed by having the car fall off the jack."

The original design was submitted to the Washington, D.C. office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers.
