

Trucking Accessory to Protect Coils Developed by InventHelp Inventor (KVV-196)

Pittsburgh-based InventHelp, a leading inventor service company, is submitting this client's idea, the COIL PROTECTOR in the hopes of a good faith review.

PITTSBURGH ([PRWEB](#)) December 05, 2017 -- "I personally knew drivers who have lost their lives due to loads coming loose," said an inventor from Sevierville, Tenn. "I have had coils shift on my trailer that were secured to the specs we have now. I came up with this idea to ensure that such coils remained secure."

He created a prototype for the patent pending COIL PROTECTOR to offer a better way to secure shotgun and suicide coil loads. The system allows chains to be used in place of straps on these loads. It is designed to enhance safety for the driver and bystanders. It also adds securement without causing damage to the coils. This improves safety standards in the trucking industry. Furthermore, the system is easy to set up.

The original design was submitted to the Knoxville office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-KVV-196, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
