

## **InventHelp Inventor Develops Communication System for Driverless Vehicles**

*InventHelp, founded in 1984 in Pittsburgh, is attempting to submit this idea, the Auto-Beacon, to applicable companies for their consideration.*

PITTSBURGH, PA ([PRWEB](#)) December 12, 2017 -- "I wanted to do my part to help make auto-pilot technology safer for the general public and people with auto-pilot vehicles," said an inventor from Broomfield, Colo.

He developed the AUTO-BEACON to enhance the functionality of the auto-pilot technology used in driverless vehicles. The system improves communication between vehicles on the road. This is designed to reduce the incidence of collisions, which helps improve roadway safety and offers added peace of mind. Furthermore, the invention is easy to install on all types of new and used vehicles with two wheels or more, including personal, public, construction and agricultural vehicles.

The original design was submitted to the Denver office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-DPH-215, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
