

Inventor Develops Vehicular Safety System for Young Children (TPA-2572)

InventHelp, founded in 1984 in Pittsburgh, is attempting to submit this idea, Life Saver, to applicable companies for their consideration.

PITTSBURGH ([PRWEB](#)) December 15, 2017 -- "I have seen too many news reports about children who died because they were left unattended in motor vehicles," said an inventor from Cape Coral, Fla. "In order to protect these young lives, I came up with this safety system."

He developed the patent-pending LIFE SAVER to prevent a child from being left in an unattended vehicle. The system ensures that parents and caregivers do not leave any children behind. This helps to reduce the incidence of injuries and deaths, which is designed to enhance personal safety. The invention provides added peace of mind. Additionally, the system is adaptable for use in any new or existing vehicle. Furthermore, it usable to safeguard pets as well.

The original design was submitted to the Tampa office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-TPA-2572, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
