

InventHelp Inventor Develops Seat-Belt Indicator (BRK-2329)

InventHelp, a leading inventor service company, is working to submit the SEATBELT LIGHT to companies for their review.

PITTSBURGH ([PRWEB](#)) December 17, 2017 -- "By law, motorists have to buckle their seat belts for safety," said an inventor from Sylacauga, Ala. "I thought it would be great if police had an easier way to tell whether or not the occupants of a vehicle were buckled up so that they could target these motorists specifically."

She developed the SEATBELT LIGHT to provide a readily visible way to indicate if the vehicle occupants are wearing their seat belts. This enables police officers to target vehicles with occupants who are not securely buckled. The invention promotes regular seat-belt use, which is designed to enhance roadway safety. The system helps ensure compliance with the law. Additionally, it is adaptable for use with any new or existing vehicle.

The original design was submitted to the Birmingham office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-BRK-2329, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
