

InventHelp Inventor Develops an Automotive Accessory for Improved Tire Traction (LGI-2418)

Pittsburgh-based InventHelp, a leading inventor service company, is submitting this client's idea, the SNOW CABLE in the hopes of a good faith review.

PITTSBURGH, PA ([PRWEB](#)) December 06, 2017 -- While safety is a top priority for tire manufacturers, there are still times when road conditions require more traction than current tires can provide. Fortunately, an inventor from Queens Village, N.Y., has found a way to solve this problem.

He developed SNOW CABLE to provide extra traction for motor vehicle tires in snow and ice. As such, it protects tires against damage and facilitates highway safety. At the same time, it helps reduce the chances of automobile accidents that cause property damage, injuries and deaths. Furthermore, this invention is weatherproof and durable for years of effective use. It is also easy to apply and remove. Other attractive features are its convenience, practicality and affordable price.

The inventor's professional experience inspired the idea. "As a truck driver, I've often experienced hazardous road conditions in winter weather and wanted to find a way to afford drivers better control of their vehicles on snow covered or otherwise slippery roads," he said.

The original design was submitted to the Long Island office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-LGI-2418, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
