

## **Convenient Device for Unloading Truck Beds Invented (TOR-9846)**

*InventHelp, a leading invention company, would like to submit Pick up Stick to companies for a good-faith review.*

PITTSBURGH ([PRWEB](#)) December 08, 2017 -- Pickup truck owners typically choose that means of transportation because of what it offers in storage space and transportation capabilities. Because these types of vehicles can easily fit and transport a range of large and heavy items, they are often sought out by contractors, construction workers and DIY enthusiasts. That being said, these vehicles can pose complications and risk of injury when they are being unloaded, as it can be tricky to retrieve items out of the bed of the truck.

An inventor from Burks Falls, Ontario, has invented PICK UP STICK, a hand tool for reaching and pulling items outward from the bed of a pickup truck. "As a part of the construction business, I have spent all of my professional life retrieving various articles from the back of truck beds," said the inventor. "After many years of trial and error, I finally came up with this invention, which would make unloading items from a truck bed much quicker and easier."

PICK UP STICK spares the truck owner from stretching over the bed walls or actually climbing onto the lowered tailgate to retrieve belongings by allowing users to easily access and retrieve belongings from their truck bed in a simple and efficient manner.

This invention allows the user to maintain proper balance and leverage while pulling to prevent painful muscle strains. Additionally, it prevents the risk of slipping and falling off the rear bumper while reaching inside the bed. It is lightweight and easy to use, transport and store.

The original design was submitted to the Toronto office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers.
