

## **InventHelp Inventor Develops Vehicular Safety System for Children and Pets**

*InventHelp, a leading inventor service company, is working to submit Casey System to companies for their review.*

PITTSBURGH ([PRWEB](#)) December 15, 2017 -- "I am a tactical self-defense instructor, and I have always taught children self-defense as well," said one of two inventors from Olympia, Wash. "Anytime I see children in danger, I try to solve the problem. Over 39 children have died from being left unattended in vehicles in 2016 alone."

They developed the CASEY SYSTEM to prevent a child or pet from being left in a vehicle unattended. The system automatically reminds adults to return to the vehicle in the event that a child or pet is forgotten. It reduces the risk of hypothermia and hyperthermia, which is designed to enhance personal safety. The system thereby offers added peace of mind to parents and caregivers. Furthermore, it is adaptable for use with both new and existing vehicles. Also, it notifies emergency services and provides GPS location.

The original design was submitted to the Seattle office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-FED-1819, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
