

## **InventHelp Inventor Develops RV Electrical Cord Support**

*Pittsburgh-based InventHelp, a leading inventor service company, is submitting this client's idea, Cord Assist, in the hopes of a good faith review.*

PITTSBURGH ([PRWEB](#)) December 15, 2017 -- An inventor from Stewartstown, Pa., has invented CORD ASSIST, an support for the electric cord used to supply power to a parked recreational vehicle. "As an avid camper and RV owner, I have experienced first-hand when the electrical cord becomes damaged due to excessive tension," said the inventor. "My invention would help to prevent that." CORD ASSIST keeps an RV cord elevated and protected by preventing excessive tension, helping to prevent unwanted stress or fatigue on the cord. It also protects the water hose. In turn, this invention helps prevent electrical discontinuity in the line that could pose a possible safety hazard with a short.

CORD ASSIST provides peace of mind for concerned campers and ensures protection for important equipment. It is lightweight, adjustable and weatherproof.

The original design was submitted to the Lancaster office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers.
